Description

AlveoExpert is a piece of software which works with Alveograph curves retrieved on a PC.

Once the curves have been downloaded, via the Alveolink, it enables alveograph parameters to be easily processed thanks to its five modules:

- **virtual warehouse:** this module enables wheat procurement and wheat or flour stock tracking to be optimized
- **optimizing mixes:** this module calculates the best mixes to be prepared depending on the W, P, G, values, price and quantity
- **additive tables:** this module enables you to view the work of the improving agents on the alveograph curve
- **comparison:** this module makes it possible to compare a sample's alveograph curve compared with a reference
- **trends:** this module enables alveograph curves to be stored by suppliers or customers to enable easy tracking

Advantages:

- Optimizing a mill's operational stages
- User-friendly
