Description

Q-Swab™ offers a self contained swabbing system, incorporating 1mL of Letheen Broth. The Q-Swab™ is easy to use, allowing the user to swab a site in either a wet or dry format. Once the Snap-Valve™ is snapped the Letheen Broth runs down the shaft of the swab and neutralises any residual sanitiser which may be present, allowing the growth of any microorganisms present. Simply then pour the Letheen Broth onto a dehydrated plate or streak onto an agar plate.
