Description

Made of durable paper-board, the GlitterBuddy™ Kit folds down to a compact box that contains all you need to run a successful hygiene training session for both hand washing and cross contamination.

When unfolded, the GlitterBuddy™ Kit resembles a germ, and you simply look through his mouth to see the results of the training session.

To demonstrate hand washing technique:-

1. Simply rub the GlitterBug® Potion onto your hands like you would with hand cream.
2. Wash your hands as you would normally and dry them.
3. Place your hands inside the GlitterBuddy™ Kit and look thru his mouth under the UV light for any fluorescent areas. These fluorescent areas highlight spots that were not adequately washed during the handwashing procedure - thus areas where microorganisms may like to lurk on your hands.

To demonstrate cross contamination using GlitterBug® Powder :-

1. Sprinkle some powder onto a piece of paper.
2. Pretend to sneeze on the paper.
3. Ask people to take the paper and sign their name for attendance records.
4. Using the GlitterBuddy™ Kit look at the fingers of the first person taking the paper. The glowing area demonstrates the cross contamination of 'bugs' from the paper to their hands.

The kit is supplied with:-

- SpotShooter® 8 UV Lamp
- GlitterBug® Potion (50mL)
- GlitterBug® Powder (18g)
- GlitterBug® Instruction Manual
- Hand wash DVD
- How to wash your hands poster
- Two pages of 'I was rude' stickers
- GlitterBug® Magnet
- Two GlitterBug® Hand Brushes
